

SPECIFICATIONS

Our Sun Topper golf car retractable top is constructed from heavy 18-gauge stainless steel tube, with rugged steel plated marine grade hardware. The patented hinge system is made from Delrin with a stainless steel locking sleeve, which slides over the hinge, locking the frame in place when fully deployed. The frame is rigidly held in place with Polypropylene 6000 Lb. tensile strength adjustable straps.

For sun and rain protection we use Sunbrella acrylic cloth, which covers our frame top and sides for maximum durability, protection and color retention. Sunbrella is our material of choice. It offers excellent fade and weather resistance, is soft and easy to work with. It is water repellant, guaranteed for five years against loss of color and strength from normal exposure conditions. Sunbrella is also the best material with the most color variety and durability.

When retracted our Sun Topper folds neatly behind the golf club bags and inside the aft bumper for complete protection. One of our options is a protective storage bag for the top when retracted. Valances are also available for more added sun protection. We can also apply lettering and your company logo to the valance for personalizing your golf car. Put your name on your top!
